Builds on a series of studies in Danishefsky lab on related family of Epothilones as anti-tumour drugs.

Propose a change in the above synthesis that could eventually lead to the formation of 15-aza-dEpoB.

Propose a change in the above synthesis that could eventually lead to the formation of 15-aza-dEpoB'.

Comment briefly on how changes in analog structure may change the molecular interaction with the target.
